

RAHUL J RAJ

MERN Stack Developer — [Portfolio](#) — +91 7909178974 — rahulraj157@gmail.com
[GitHub](#) — [LinkedIn](#)

Profile Summary

MERN Stack Developer with hands-on experience building scalable full-stack applications including job portals, e-commerce platforms, and real-time systems. Strong in designing REST APIs, implementing secure authentication using JWT, and optimizing React performance using modern hooks. Experienced in deploying applications using AWS, Docker, and CI/CD pipelines. Focused on writing clean, maintainable code and solving real-world problems through efficient system design.

Technical Skills

- **Languages:** JavaScript, TypeScript
- **Frontend:** React.js, Next.js, Redux, Tailwind CSS
- **Backend:** Node.js, Express.js, REST API Design, Clean Architecture
- **Database:** MongoDB, MySQL
- **Tools & Tech:** Docker, AWS EC2, Nginx, GitHub Actions, Socket.io, Firebase, Razorpay
- **Concepts:** JWT Authentication, API Optimization, Pagination, Caching Basics, DSA

Experience

Freelance MERN Stack Developer

Aug 2025 – Present

- Developing full-stack web applications independently, including job portals, e-commerce platforms, and financial systems
- Designing and implementing scalable REST APIs with authentication, validation, and role-based access control using JWT
- Integrating real-time features such as chat and notifications using Socket.io
- Deploying applications using AWS EC2, Docker, and Nginx for optimized performance and reliability
- Improving frontend efficiency using React optimization techniques (useMemo, useCallback)
- Managing MongoDB databases including schema design, indexing, and aggregation queries

MERN Stack Developer Trainee

Aug 2024 – Aug 2025

Prototype, Kozhikode

- Built multiple full-stack applications using MERN stack as part of intensive training program
- Developed projects including job portal, e-commerce platform, and real-time chat applications
- Gained hands-on experience in REST API development, authentication (JWT), and frontend state management
- Worked with modern tools including React, Next.js, MongoDB, and Express.js
- Learned clean architecture principles and best practices for scalable application development

Projects

CareerUp - Job Portal

[Live](#) — [GitHub](#)

- Engineered a scalable role-based job portal supporting candidates, recruiters, and admin workflows with secure access control
- Designed and developed backend services using **Node.js** and **Express.js**, implementing robust REST APIs with pagination, filtering, and search for efficient data handling

- Implemented secure authentication using **JWT** with **refresh token strategy**, along with OAuth (Google, GitHub) for seamless and secure user sessions
- Built dynamic and responsive frontend using **React.js** and **Redux** for efficient global state management and predictable UI behavior
- Integrated real-time communication using **Socket.io**, enabling instant recruiter-candidate messaging
- Implemented email-based workflows using **Nodemailer** for account verification and notifications
- Structured the application using **Clean Architecture** principles to ensure modular, maintainable, and scalable codebase
- Optimized frontend performance using React memoization techniques and efficient rendering strategies, improving overall user experience

FinMate - Personal Finance App

[Live](#) — [GitHub](#)

- Built a personal finance tracker with analytics dashboards using Next.js and TypeScript
- Implemented authentication using NextAuth and JWT with email verification
- Used MongoDB aggregation pipelines for expense tracking and reporting
- Improved performance using lazy loading and React optimization techniques

DreamFurni - E-commerce Platform

[Live](#) — [GitHub](#)

- Developed a full-featured e-commerce platform with cart, wishlist, and admin dashboard
- Integrated Razorpay payment gateway and COD for secure transactions
- Implemented OTP-based authentication using Nodemailer
- Deployed on AWS EC2 with Nginx reverse proxy for optimized request handling

Mini Projects

- Video Call App – Built using React and ZEGOCLOUD with authentication system
- OLX Clone – Product listing platform using React and Firebase
- Next.js App Router Demo – SSR/SSG based modular application
